

My husband and I purchased a vehicle with an XM ready radio/stereo. We signed up for it and love it. Why? Because it actually has music, not commercials. I can't drive to work (10 miles, 25 minutes) in rush hour and hear more than one song. I also can never hit their exact traffic and weather time. Even when button pushing, I can't get it. I had already quit listening to local radio and was listening to cd's while driving to and from work or when travelling long distances. Just like I purchased and support satellite TV to encourage improving local fare, I will do the same for satellite radio. As a matter of fact, I just had XM installed on our second vehicle and boat.
